With two amazing Slim products, how do you identify which one is best for your prospect’s health journey? Recommending Plexus® products first starts with understanding what your prospect wants to accomplish with their health.

**02 | Daily Frustrations**

What are your prospect’s health goals? Do they want to lose weight? Are they struggling with overeating? Do they want to improve gut health?

Ask your prospect how they want to improve their health. Listen to their frustrations.

- “I want to lose weight but keep giving in to my bad food choices.”
- “I feel like I constantly struggle with overeating.”
- “I know it’s important to improve my gut health but don’t know where to start.”

When you hear their concerns, you will more easily identify which Slim is best.

“You’re the perfect candidate to start your health journey with Slim Hunger Control!”

“OR—

“You would love the gut health benefits of Slim Microbiome Activating!”

---

◊ The results of an in vitro human gut simulator study suggest that Slim’s formula may have several beneficial effects. Further research, including research conducted in humans, is needed to confirm these preliminary findings.
For optimal results, Slim Microbiome Activating and Slim Hunger Control work together to offer a one-two punch!

**Morning:** Take Slim Microbiome Activating in the morning to kick start your day. Starting the day with Slim Microbiome Activating supports glucose metabolism and gives your gut microbes the daily support they need.*

**Before lunch:** Take Slim Hunger Control before lunch for continued glucose management support, and to help curb hunger and reduce the desire to overeat.*

03 | Two Great Choices

Slim Hunger Control isn’t meant to replace Slim Microbiome Activating, but it is a new addition to the Plexus family, which is growing to provide options that can best suit individual needs.*

**Slim Choice #1:** Your prospect may choose to start with Slim Hunger Control to jumpstart their goal to reduce hunger and form healthy habits. Once they have achieved those goals, your prospect may want to switch to Slim Microbiome Activating to place more focus on optimal gut health.*

**Slim Choice #2:** Your prospect may want weight loss benefits but feel they don’t need extra support to reduce their desire to overeat. Their choice would be Slim Microbiome Activating, where they can benefit from increased akkermansia, a good gut microbe that positively impacts a disrupted metabolism associated with being overweight.*

**Slim Choice #3:** Your prospect may want to rotate between Slim Hunger Control and Slim Microbiome Activating as needed. The best of both worlds!

04 | How do you include these two

Do you want to break your bad food habits? It can take up to 66 days for a new behavior to become automatic. Plexus Slim® Hunger Control helps support your ultimate health goals to help form good habits!

1 Participants in an independent, randomized, double-blind, placebo-controlled, human clinical study who used one pack of Slim per day lost an average of 1.45 pounds in 8 weeks, while the placebo group lost an average of 3.32 pounds. Although this difference was not substantially significant (p=0.05), there was a trend to weight decrease with Slim group (p=0.059).
